SUPPLY CHAIN OPTIMIZATION

WHAT WE DO

At Ennubin, we streamline and optimize processes for businesses across the supply chain. It is no secret that businesses always look for ways to optimise their operations, so that they can save time and money in the long run. Some attempt to do this internally, using employees, and sometimes hire operational excellence operatives, however, many businesses have begun to hire specialists, like ourselves, who take care of the whole process for them.

WE OPTIMIZE IN 3 DIFFERENT WAYS

01 SOFTWARE

CMMS

Computerized Maintenance Management Software is a remedy for manual processes that slow a business down and eat away team productivity. It makes it possible to generate real-time reports about a business and helps structure work orders efficiently. For example, CMMS makes it easy to see in advance, which assets will require preventive maintenance, resulting in better organization of your business.

ERP

Enterprise resource planning is business process management software that allows a business to manage its daily operations and automate back office functions related to services, human resources, and technology, using a system of bundled applications.

BLOCKCHAIN

A blockchain is an increasing list of records, referred to as blocks, that are linked together using cryptography. Every block contains a cryptographic hash of the previous block, a timestamp, and transaction data. They are resistant to modification. Blockchain has strong potential in supply chain businesses. It has become the backbone for modern-day tracking software. Our blockchain-based software solutions support various industries such as, Investment, Manufacturing, Healthcare, FinTech, Energy Management, Trading Retail and so on.

02 MACHINES

Machine automation is based on technologies like electronics and mechanics and is used to automated tasks or work without the intervention of a human. It has been present in the manufacturing industry for decades, however, it is relatively new to the healthcare, business, and finance industries.

Here at Ennubin, we focus on custom robotics and automation solutions and systems integration. We regularly work closely with companies to develop cost-effective solutions. Machine automation can be a game-changer in a business, for example, it can help eliminate healthcare costs, paid-leave and holidays associated with a human equivalent.

Moreover, machine automation means less employee benefits such as, bonuses and pension expenses. Our systems are reliable because we partner with big names in machine automation in order to have access to their components and sub-systems. This results in robustness and reliability, which trickles down to our customers, bringing them significant productivity gains.

03 WORKFORCE

WFO

Workforce optimization is a strategy regularly used in businesses. Its main focus is customer satisfaction. It provides businesses with key data about the performance of their workforce, and helps automate processes within a business in order to reduce on-going operational costs as well as manage employee performance, which ultimately results in higher customer satisfaction.

Our WFO solutions will help you empower your employees with an assortment of tools that provide insight into their work performance. You will be able to show them how their performance can directly impact the business' performance, which in turn will result in them working to deliver a better customer experience. With our guidance, you will have the power to accelerate growth by providing a best-in-class customer experience.

Ennubin's all-in-one service, i.e. software, machines, and workforce, link together the most important elements that drive a supply-chain business, that is, their suppliers, channels, systems, and most importantly, their customers.

ENNOBIN'S VALUES

RESPONSIBILITY

We lead by example and champion each mission. We never walk away from our commitments, and see tasks through to the very end. We act with integrity and respect.

PASSION

We care for our employees, colleagues, associates, and most importantly, our customers. We help improve businesses, one business at a time. You could say what we do is not a job, it is our passion.

TEAM SPIRIT

We trust one another while approaching tasks with team spirit. We share ideas and best practises. We build long-term working relationships. We are like a big family, and treat everyone else that way.

CUSTOMER CENTRICITY

We provide our clients with top talent and custom solutions to suit their needs. We help them achieve their most important business goals. We are fuelled by their success. We create ever-lasting value for our clients.
